

FINAL AI/NLP PROJECT

MMA – Macro Market Assistant

By Willie Breaux

An AI system that transforms macro and crypto market data into structured investor-grade intelligence.

Retail investors face fragmented data, weak context, and signal noise. MMA organizes financial intelligence into **regime, score, posture, key drivers, narratives, and evidence** — so users understand what is happening, why it matters, and how to respond.

The Brains

A clean pipeline from raw data to structured intelligence — engineered for accuracy, transparency, and resilience.

1. Grounded Generation

Every output is anchored to live, verifiable data. Fabrication is structurally prevented — not just prompted against.

2. Quality Ratchet

The system can only improve. The bridge file is a one-way gate. No regression is possible by design.

3. Autonomous Prompt Evolution

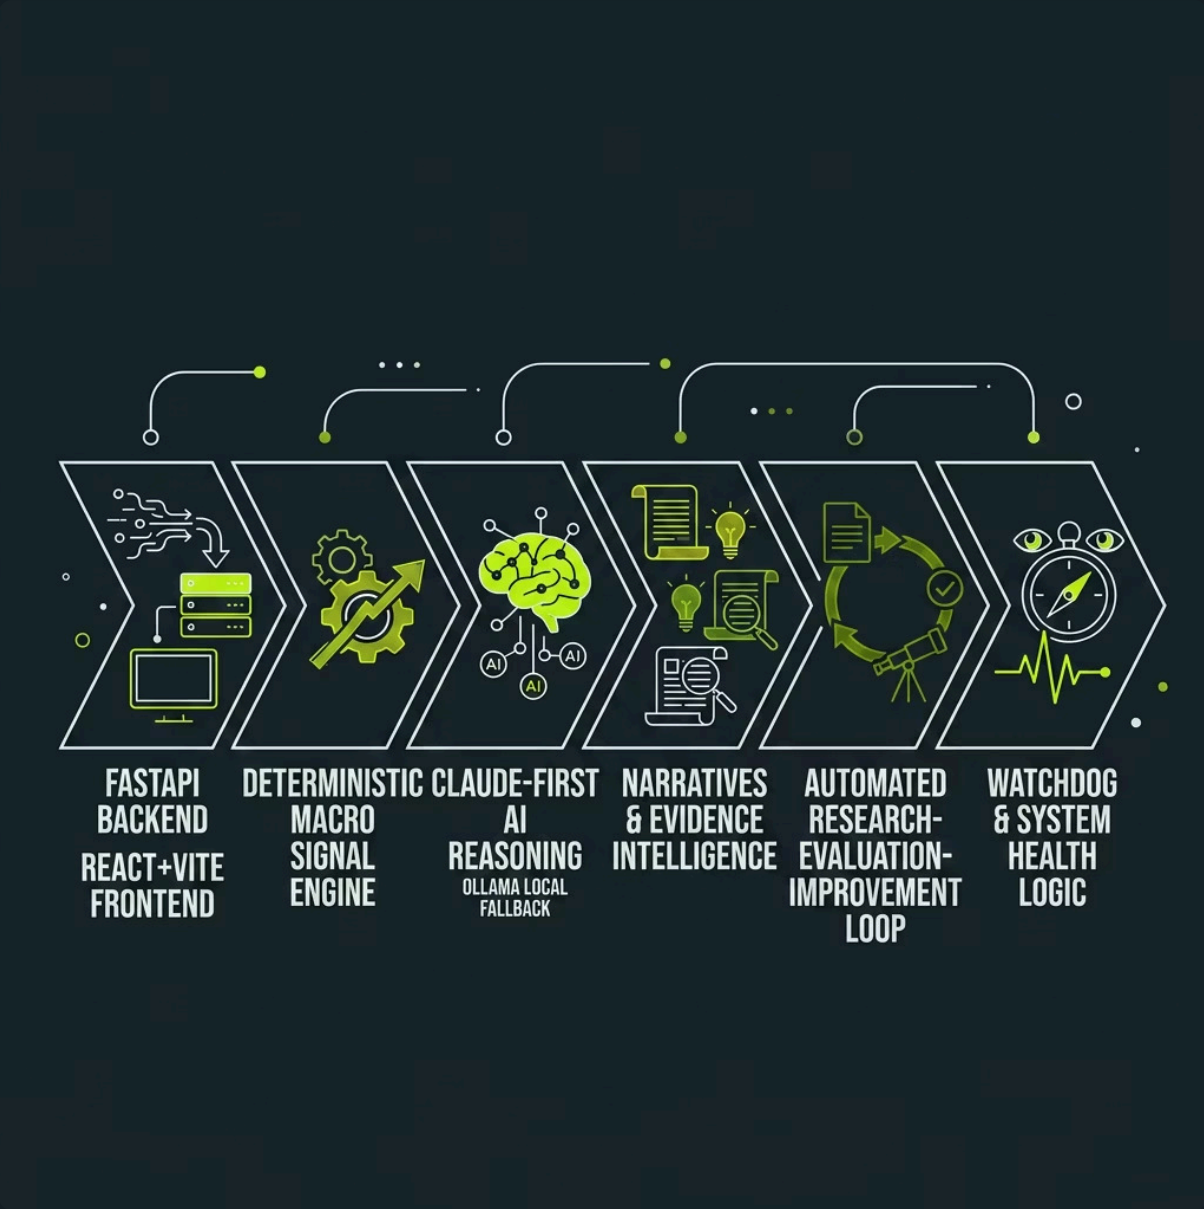

When quality stalls, the system rewrites its own instructions. No human needed to unblock it.

4. Self-Healing Infrastructure

The watchdog layer ensures the loop never permanently stops — services restart, data refreshes, and prompts evolve automatically.

5. Field Agentic

The domain is a variable. Swap the live data source and evaluation criteria — the loop works for any field.

The Result
