

Willie Breaux

APPLIED AI & ROBOTICS

Applied AI and robotics student focused on practical systems, responsible AI, and clear technical documentation.

Learning Journey

Two semesters of applied coursework – from foundational Python and machine learning through advanced AI product design, deep learning, and hands-on robotics engineering.

Previous Semester

- Python & machine learning foundations
- Computer vision labs & notebooks
- Structured project reports
- Data workflows & model evaluation

Current Semester

- NLP product design & AI applications
- Deep learning architectures
- Raspberry Pi, PiCar-X & ROS concepts
- Robotics hardware labs & documentation

Featured Projects

A cross-semester portfolio spanning AI product design, computer vision, and hands-on robotics — each project documented with professional-grade artifacts.

Macro Market Assistant

NLP and AI product-planning project including notebooks, PRD/TDD/TRD documents, system diagrams, prototype files, and acceptance criteria.

📁 Current-Semester/Macro-Market-Assistant-School-Submission/

Emotion Recognition

Computer vision labs and emotion-recognition project artifacts from previous coursework, demonstrating image classification pipelines and model evaluation.

📁 Previous-Semester/Computer-Vision-Emotion-Recognition/

Robotics & Raspberry Pi

Hands-on robotics documentation covering Raspberry Pi, Sense HAT, PiCar-X, and ROS platform concepts through structured lab reports and demos.

📁 Current-Semester/Robotics-ROS-Raspberry-Pi/

Skills & Competencies

A practical, cross-disciplinary skill set built through coursework, labs, and self-directed documentation — ready for AI and robotics roles in industry or research.

Python & Jupyter

Notebooks, scripts, model workflows, and reproducible data pipelines.

ML & Deep Learning

Machine learning foundations, deep learning architectures, and model evaluation.

Robotics & IoT

Raspberry Pi, Sense HAT, PiCar-X, and ROS platform labs with hardware documentation.

GitHub & Organization

Structured portfolio repositories, version control, and clean project layout.

Computer Vision & NLP

Image classification, emotion recognition, and NLP product design concepts.

AI Documentation

PRD, TDD, TRD writing, responsible AI analysis, and clear project presentation.

Reflection & Next Steps

What I've Built

This portfolio documents growth from foundational Python notebooks into applied AI product design and hands-on robotics engineering – with an emphasis on responsible AI, clear documentation, and professional project presentation throughout.

 GitHub Portfolio

<https://github.com/wbreauxiii-lgtm/Willie-Breaux-Applied-AI-Robotics-Portfolio>

Where I'm Headed

- Strengthen public demos and reproducibility
- Add clean setup instructions to all repos
- Continue building AI and robotics systems
- Pursue applied research and industry opportunities
